

Division:

# STAINLESS

Farra Stainless has built its reputation in stainless steel fabrication on the back of the beverage industry and dairy industry and in recent times has emerged as a leading manufacturer for all stainless requirements. We can assist with design and you can take advantage of our considerable in-house experience of integrating laser and turret punch profiles and components into general stainless steel fabrications.

### Design

Farra has engineered to New Zealand, Australian and British standards, a wide range of projects, utilising our experienced design team combined with skilled tradesmen and supporting QA systems. Projects include general fabrication for the dairy industry, heat exchangers, pressure vessels, storage tanks/silos, steam jacketed pans, milli-screens, mini breweries, shrink wrap tunnels, conveyors, material handling systems and plant process layout and design.

### Workshop

The facility is a dedicated stainless workshop serviced by high technology welding equipment, backed up with guillotines, a flanging machine and a wide range of grinding and polishing equipment.

It is divided to cater for light and heavy fabrication, allowing for the development of specialised skills and techniques. Consequently we can handle fabrication from 22ga sheet up to 20mm plate.

Farra Stainless is fortunate to be aligned with Farra Sheetmetal Components whose laser, turret and folding facilities complement any stainless steel fabrication requirements, increasing our ability to provide the full solution.

### Recent projects

Work in recent times has the fabrication and installation of:

- Complex fabrications for the dairy industry made to British and Australian standards
- Micro breweries and wine tanks for the beverage industry
- Processing and conveyor belt handling systems for food
- Architectural fittings for internal and external fitouts
- Kitchen and general fitouts for the maritime industry.
